

NATURE METHODS

Nature Methods provides practical and cutting-edge information on methodological developments, new techniques and crucial tools for scientists working in the fastpaced world of life science research.*

Topics: Techniques useful for various aspects of molecular and cellular biology (cell culture, antibody-based techniques, PCR, RNA interference, recombinant DNA, cell signaling studies), and fluorescent and nonfluorescent imaging. *Nature Methods* also publishes high-profile papers describing genetics and genomics methods (related to sequencing, microarrays, analysis, and manipulation of gene expression), as well as proteomics techniques (including mass spectrometry, protein expression and separation techniques, NMR, and structural genomics approaches).
